

# Allen's Test Arm

Designed for precision and realism, the Allen's Test Arm enables accurate assessment of radial and ulnar artery blood flow. A must-have training tool for clinicians to build confidence in vascular evaluation.

## Features

- The Allen test is a medical procedure used to evaluate the adequacy of collateral blood circulation to the hand through the radial and ulnar arteries.
- Adjustable Blood Flow Dynamics allows variation in refill time to simulate normal and compromised circulation for enhanced clinical training scenarios.
- High-Fidelity Anatomical Design features lifelike hand anatomy with palpable arterial points for realistic practice of compression techniques.
- Durable and Reusable Construction from high-quality, medical-grade materials suitable for repeated use in training environments.
- Simple setup with intuitive controls, enabling instructors to easily demonstrate and students to practice Allen's test effectively.

## Skills Gained

- Ability to evaluate arterial blood flow and collateral circulation of the hand accurately.
- Improved skill in locating and applying correct pressure on radial and ulnar arteries.
- Competence in distinguishing between normal and abnormal Allen's test findings based on refill time.
- It is commonly performed before radial artery cannulation, cardiac catheterization, and arterial blood gas (ABG) sampling to avoid ischemic damage to the hand.
- Understanding the importance of assessing circulation before invasive procedures to prevent complications.

# REVOLUTIONIZING MEDICAL TRAINING WITH CUTTING EDGE SIMULATORS

Maverick Simulation Solutions Ltd. is a trusted medical simulation company advancing healthcare education through the design, manufacturing, and deployment of state-of-the-art simulators. Led by experts across engineering and clinical domains, we deliver innovations that measurably improve training quality, learner competency, and patient safety.
